

Teyzix Core Internship (June Batch)

Task Information

- **Task Title:** Field Service Management Mobile Application
- **Task ID:** MAD-2
- **Domain:** Mobile App Development
- **Assigned Date:** 20th June 2026
- **Submission Deadline:** 29th June 2026

Objective

Develop a mobile application that enables field technicians to manage assigned service requests, update job progress, communicate status updates, and maintain service records while working remotely.

Problem Statement

Many service-based businesses such as internet providers, maintenance companies, appliance repair services, and technical support organizations rely on field technicians to complete on-site tasks. Managing these operations through calls and spreadsheets often results in delays, poor tracking, and inefficient communication.

Your task is to develop a mobile application that streamlines field operations by allowing technicians to manage assigned jobs, update progress, and maintain service reports directly from their mobile devices.

Task Requirements

Authentication

- User registration and login
- Password management
- Secure authentication flow
- Session management

Dashboard

- View assigned jobs
- View completed jobs
- View pending jobs
- Daily activity overview
- Service statistics

Job Management

- View service requests
- Accept or reject assigned jobs
- Update job status
- Mark jobs as completed
- Add service notes

Service Report Module

- Create service reports
- Record issue details
- Record actions performed
- Add completion remarks
- Maintain service history

Customer Information

- View customer details
- Contact information
- Service location
- Service request history

Notifications

- New job notifications
- Status update notifications

- Reminder notifications

General Requirements

- Responsive mobile interface
- Proper form validation
- Offline-friendly user experience
- Error handling
- Clean navigation structure
- Professional UI design

Data Requirements

The application should manage the following information:

Users

- Full Name
- Email Address
- Contact Number
- Role

Service Requests

- Request ID
- Customer Name
- Service Type
- Issue Description
- Status
- Assigned Technician
- Service Date

Service Reports

- Report ID
- Service Request Reference
- Findings
- Actions Taken
- Completion Notes
- Timestamp

Technology Flexibility

Interns are free to use any mobile development framework, programming language, backend solution, database, architecture, or development methodology of their choice.

Examples include but are not limited to:

- Flutter
- React Native
- Kotlin
- Java
- Swift
- Ionic
- Xamarin

Backend and database technologies may include:

- Node.js
- Django
- Laravel
- Firebase
- Supabase
- MongoDB
- PostgreSQL
- MySQL

The choice of technology will not affect evaluation. The primary focus will be on functionality, application structure, user experience, implementation quality, and problem-solving approach.

Bonus Features (Optional)

- GPS Location Tracking
- Image Upload for Service Evidence
- QR Code-Based Job Verification
- Dark Mode
- Push Notifications
- Offline Data Synchronization
- Technician Performance Analytics

Deliverables

- Complete Source Code
- GitHub Repository

- README Documentation
- APK / IPA / Installation Package
- Screenshots or Demo Video
- Database Schema (if applicable)
- Deployment Link (if applicable)

Evaluation Criteria

- Functionality and Feature Completion – 35%
- Mobile UI/UX Design – 25%
- Application Architecture and Code Quality – 20%
- Data Management and Validation – 10%
- Responsiveness and Performance – 10%

Difficulty Level

Intermediate

Industry Relevance

Field service management applications are commonly used by internet service providers, maintenance companies, logistics providers, utility services, technical support teams, and enterprise service organizations. This project reflects a real-world mobile development scenario involving workforce management, job tracking, customer interaction, and operational efficiency.
